ROUTEING MEASURES AND SHIP REPORTING SYSTEMS

Amendments to the existing mandatory ship reporting system "In the Western European Particularly Sensitive Sea Area" (WETREP)

Submitted by Belgium, France, Ireland, Portugal, Spain and United Kingdom

SUMMARY

Executive summary:	This document contains a proposal to amend the existing ship reporting system "In the Western European Particularly Sensitive Sea Area" (WETREP) adopted by resolution MSC.190(79), as amended by resolution MSC.301(87).
Strategic direction, if applicable:	7
Output:	7.22
Action to be taken:	Paragraph 21
Related documents:	Resolutions A.851(20), as amended, MSC.190(79), as amended by MSC.301(87), and MSC.433(98); MSC/Circ.1060, as amended; MSC.1/Circ.1608; NCSR 12/3/3 and NCSR 11/INF.8

Introduction

1 This document contains a proposal by Belgium, France, Ireland, Portugal, Spain and the United Kingdom to amend the existing mandatory ship reporting system "In the Western European Particularly Sensitive Sea Area" (WETREP) (resolution MSC.190(79), as amended by resolution MSC.301(87)).

2 The proposal was drafted based on close expert cooperation of the submitting States during the WETREP coordination meetings.

3 The annex contains the suggested amendments to the WETREP system. All changes are shown using track changes applied to resolution MSC.190(79), as amended by resolution MSC.301(87).

Summary

4 The existing WETREP system was established more than 40 years ago based on the ship reporting requirements and coastal State capabilities available at the time of its adoption. Since then, significant advancements have been made in ship monitoring and maritime data exchange technologies. Despite this technological progress, WETREP still relies largely on manual position reporting by VHF or other traditional communication means at designated reporting points/lines. While there are still uses for VHF such as for safety, distress, or abnormal navigation situations, updating the WETREP system will improve communication for both ships and coastal authorities.

5 The proposed amendment to the WETREP system aims to modernize the reporting procedure for ships as much as possible. This will lead to improvements for administrative processing, while at the same time it will improve navigation monitoring by the use of modern technology.

6 Furthermore, the amendment to the WETREP system pertains also to the information to be provided under designator X "miscellaneous", where details related to maritime insurance would be required. Since 2009, Directive 2009/20/EC3[*] on the insurance of shipowners for maritime claims has required notification of proof of marine insurance for any ship, irrespective of the flag, when operating in ports or the territorial sea of EU Member States. Making this additional information available will be of great value, particularly in relation to safety of life at sea, maritime safety, and the protection of the marine environment within the WETREP operational area.

Marine environmental considerations

7 Ship reporting systems play a vital role in ensuring safety of life at sea, maritime safety, operational efficiency, and environmental protection. The increase in transport and the movement of hazardous cargoes such as oil elevate the risk of maritime incidents and potential environmental harm along European coastlines. These circumstances highlight the necessity for verifying maritime insurance, as ships lacking adequate insurance represent a significant threat to both safety and environmental standards.

8 The International Conventions on Civil Liability for Oil Pollution Damage (1992), Bunker Oil Pollution Damage (2001), and Wreck Removal (2007) require ships in scope to carry convention certificates from their flag State or another State party confirming that there is insurance in place capable of meeting the liability obligations imposed by the conventions.

9 These conventions require ships to hold sufficient insurance coverage and provide a convention certificate, signed by the ship's flag State or another State party, confirming strong financial backing for potential oil spill damages.

10 This requirement is directly connected to the safety and protection of the marine environment as part of the broader international framework for safety and pollution prevention. Flag States are responsible for ensuring that ships under their flags comply with statutory requirements, including insurance, which is necessary for transporting cargo such as dangerous or polluting goods. Failure to meet these requirements results in a violation of regulations and can disrupt the established system balance.

[*] Directive 2009/20/EC of 23 April 2009 on the insurance of shipowners for maritime claims. O.J. L131/128 of 28 May 2009.

11 The proposed amendment would require ships to provide evidence of insurance for maritime claims in the event of a maritime incident. This measure aims to improve enforcement of marine safety and environmental protection while maintaining the rights of coastal States to seek legal remedies for damages. Without the ability to verify clear ship ownership and insurance, these protections may fail, potentially leaving coastal States responsible for spill-related damages.

Cooperation between States

12 Participation in the ship reporting system will be limited exclusively to States participating in the WETREP system; these are Belgium, France, Ireland, Portugal, Spain and the United Kingdom.

Communication required for the system

13 The communication requirements for implementing the new reporting requirement are a stable Internet connection enabling 24/7 access to the ship web user interface of the European Union Maritime Information and Exchange system (SafeSeaNet). This will be considered the primary method of reporting. All other forms of communications such as email and communication on dedicated radio frequencies can still be used as a backup to the primary means of reporting.

Shore-based facilities to support the operation of the system

14 The shore-based facilities that support the operation of the system include the SafeSeaNet system, an integrated system of AIS base stations, VHF shore-based facilities, email, and other communication methods as specified in the annex, appendix 1. Support for legacy communication methods such as telex will be discontinued.

15 The shore-based facilities are staffed around the clock by personnel trained and certified according to applicable national and international regulations to support the operation of the proposed system.

16 Cyber risk management is implemented in compliance with national and international regulations and standards, including applicable data protection legislation.

Details regarding the appropriate procedures to follow in the event of a failure of the shore-based Authority's communication facilities.

17 The system incorporates adequate redundancy measures to effectively address typical SafeSeaNet system failures.

Measures to be taken if a ship fails to comply

18 The primary aim of the system is to facilitate safe navigation and safeguard the marine environment by enabling the exchange of information between ships and shore authorities. Should a ship fail to submit required reports (including convention certificates) and be positively identified, relevant details may be communicated to the appropriate flag State Authorities for further investigation and potential prosecution in accordance with national legislation. Additionally, this information may be shared with the national competent authorities.

19 Concerning convention certificates, such action should be undertaken solely when the flag State is a party to the applicable conventions.

Relevant rules and regulations

20 The relevant rules and regulations in force in the Western European Particularly Sensitive Sea Area are the existing mandatory ship reporting systems and traffic separation schemes. The original resolution was adopted on 6 December 2004; therefore a review of the relevant rules and regulations can be considered as a natural update to the system. The International Regulations for Preventing Collisions at Sea (COLREG) are applicable through the whole area covered by the system.

Action requested of the Sub-Committee

21 The Sub-Committee is invited to consider the proposed amendments to the existing ship reporting system "In the Western European Particularly Sensitive Sea Area" (WETREP), as set out in the annex, with a view to adoption by the Maritime Safety Committee with an effective date of implementation of six months after adoption.

***

ANNEX

DRAFT MSC RESOLUTION

ADOPTION OF AMENDMENTS TO THE MANDATORY SHIP REPORTING SYSTEM "IN THE WESTERN EUROPEAN PARTICULARLY SENSITIVE SEA AREA" (RESOLUTION MSC.190(79), AS AMENDED BY MSC.301(87))

THE MARITIME SAFETY COMMITTEE,

RECALLING Article 28(b) of the Convention related to the creation of the International Maritime Organization concerning the functions of the Committee,

RECALLING ALSO regulation V/11 of the International Convention for the Safety of Life at Sea, 1974 (SOLAS Convention), in relation to the adoption of mandatory ship reporting systems by the Organization,

RECALLING FURTHER resolution A.858(20), which authorizes the Committee to perform the function of adopting ship-reporting systems on behalf of the Organization,

TAKING INTO ACCOUNT the *Guidelines and criteria for ship reporting systems* adopted by resolution MSC.433(98),

HAVING CONSIDERED the recommendations of the Sub-Committee on Navigation, Communications and Search and Rescue at its […] session,

HAVING ALSO NOTED that the Marine Environment Protection Committee, at its fifty-second session, endorsed the recommendations of the Sub-Committee on Safety of Navigation at its fiftieth session and designated the Western European Waters as a Particularly Sensitive Sea Area (PSSA) by resolution MEPC.121(52),

1 ADOPTS in accordance with SOLAS regulation V/11, the revised mandatory ship reporting system "In the Western European Particularly Sensitive Sea Area", as set out in the annexes to the present resolution;

2 DECIDES that the above-mentioned amended mandatory ship reporting system will enter into force on [date (six months after adoption)];

3 REQUESTS the Secretary-General to bring this resolution and its annex to the attention of Contracting Governments to the SOLAS Convention and to members of the Organization.

4 REVOKES resolutions MSC.190(79) and MSC.301(87)) as from […].

ANNEX 1

DESCRIPTION OF THE MANDATORY SHIP REPORTING SYSTEM FOR THE WESTERN EUROPEAN PARTICULARLY SENSITIVE SEA AREA

The West European Tanker Reporting System (WETREP) is established in the Western European Waters Particularly Sensitive Sea Area (resolution MEPC.121(52)).

1 CATEGORIES OF SHIPS REQUIRED TO PARTICIPATE IN THE SYSTEM

1.1 Ships required to participate in the mandatory ship reporting system WETREP:

Every kind of oil tanker of more than 600 tonnes deadweight, carrying a cargo of:

.1 heavy crude oil, meaning crude oils with a density at 15°C of higher than 900 kg/m^3;

.2 heavy fuel oils, meaning fuel oils with a density at 15°C of higher than 900 kg/m^3, or a kinematic viscosity at 50°C of higher than 180 mm^2/s;

.3 bitumen and tar and their emulsions.

1.2 Pursuant to SOLAS, the mandatory ship reporting system WETREP does not apply to any warship, naval auxiliary or other vessel owned or operated by a contracting government and used, for the time being, only on government non-commercial service.

2 GEOGRAPHICAL COVERAGE OF THE SYSTEM, AND NUMBER AND EDITION OF THE REFERENCE CHART USED FOR THE DELINEATION OF THE SYSTEM

2.1 The area covered by the reporting system WETREP is defined within the following co-ordinates and are also shown in the chartlet attached at appendix 3:

Number	Latitude	Longitude
1 (UK)	58° 30' N	UK coast
2 (UK)	58° 30' N	000° W
3 (UK)	62° N	000° W
4 (UK)	62° N	003° W
5 (UK+ Irl)	56° 30' N	012° W
6 (Irl)	54° 40'40".91 N	015° W
7 (Irl)	50° 56'45".36 N	015° W
8 (Irl+UK+F)	48° 27' N	006° 25' W
9 (F)	48° 27' N	008° W
10 (F+S)	44° 52' N	003° 10' W
11 (S)	44° 52' N	010° W
12 (S)	44° 14' N	011° 34' W
13 (S)	42° 55' N	012° 18' W
14 (S+P)	41° 50' N	011° 34' W
15(P)	37° N	009° 49' W
16 (P)	36° 20' N	009° 00' W
17(P)	36° 20' N	007° 47' W
18 (P)	Guadiana River mouth 37° 10' N	007° 25' W

Number	Latitude	Longitude
19 (B)	51° 22'25" N	003° 21'52".5 E (border between B and NL)
20 (UK)	52° 12' N	UK east coast
21 (IRL)	52° 10'.3" N	006° 21'.8" W
22 (UK)	52° 01'.52" N	005° 04'.18" W
23 (UK)	54° 51'.43" N	005° 08'.47" W
24 (UK)	54° 40'.39" N	005° 34'.34" W

2.2 The reference chart is Admiralty chart No.4011 (World Geodetic System, 1984, Datum (WGS 84)).

3 FORMAT, CONTENTS OF REPORT, TIMES AND GEOGRAPHICAL POSITIONS FOR SUBMITTING REPORT. AUTHORITIES TO WHOM THE REPORTS MUST BE SENT AND AVAILABLE SERVICES

3.1 Format

3.1.1 WETREP reports shall be sent to the nearest participating coastal or communication station listed in ~~annex 1,~~ appendix 1 and shall be drafted in accordance with the format as shown in appendix 2.

3.1.2 The format of the report described below is in accordance with resolution A.851(20), – appendix, paragraph 2.

3.2 Contents of report

3.2.1 The report required from participating ships contains information that is essential to achieve the objectives of the system:

.1 the ship's name, call sign, IMO number/MMSI number and position are needed for establishing the identity of the ship and its initial position (letters A, B and C);

.2 the ship's course, speed and destination, are important in order to maintain track of the ship so as to be able to implement search and rescue measures if a report from a ship fails to appear; to be able to instigate measures for the safe navigation of the ship; and to prevent pollution in the areas where weather conditions are severe (letters E, F, G and I). Proprietary information obtained as a requirement of the mandatory ship reporting system WETREP will be protected under this system consistent with the *Guidelines and criteria for ship reporting systems, as amended* (resolution A.851(20));

.3 the number of persons on board and other relevant information are important in relation to the allocation of resources in a search and rescue operation (letters P, T and W); and

.4 in accordance with the provisions of the SOLAS and MARPOL conventions, ships will provide information on defects, damage, deficiencies or other limitations (under "Q") as well as, additional information (under "X").as defined by SOLAS regulation IX/1.2.

3.3 Time and geographical position for submitting report

3.3.1 Ships must report:

.1 on entry into the Reporting Area as defined in paragraph 2; or

.2 immediately on departing from a port, terminal or anchorage within the Reporting Area; or

.3 when they deviate from routeing to their original declared destination port/terminal/anchorage or position "for orders" given at time of entry into Reporting Area; or

.4 when deviation from planned route is necessary due to weather or equipment malfunction or a change in the navigational status; and

.5 when finally exiting from Reporting Area.

3.3.2 Ships need not report if, while on normal passage routeing during transit of Reporting Area, the boundary of the Reporting Area is crossed on other occasions apart from the initial entry and final exit.

3.4 Shore-based authorities to whom reports are sent

3.4.1 Upon entering the WETREP Reporting Area, ships will notify the co-ordination centre of the responsible authority of the coastal State participating in the system. The vessel traffic services, RCC, coastal radio station or other facilities to whom the reports must be sent to are listed in appendix 1.

3.4.2 Should the ship be unable to send the report to the nearest coastal radio station or other facility, the report shall be sent to the next-nearest coastal radio station or other facility as listed in appendix 1.

3.4.3 ~~Reports may be sent by any modern communication form, including Inmarsat-C, telefax and e-mail as appropriate.~~ Available means of communication

3.4.3.1 Reports shall be submitted by electronic means, using the SafeSeaNet platform as primary means of reporting. Alternative means of communications assigned to the competent shore-based authority (CST) can still be used as a backup to the primary means of reporting.

3.4.3.2 The SafeSeaNet web user interface for electronic ship reporting shall be utilized to submit and review WETREP reports, as well as to consult the responses of CST to these reports.

3.4.3.3 Through the use of SafeSeaNet, ships are able to access information pertaining to their ship and may efficiently reuse available information when creating a new report.

3.4.3.4 The SafeSeaNet web user interface can be accessed at: https://wetrep.emsa.europa.eu.[1]

[1] The interface will be activated when the measure is approved and in force.

4 INFORMATION TO BE GIVEN TO PARTICIPATING SHIPS AND PROCEDURES TO BE FOLLOWED

4.1 If requested, coastal States can provide ships with information of importance for the safety of navigation in the ship Reporting Area, from broadcasting devices set up in the coastal States.

4.2 If necessary, individual information can be provided to a ship in relation to the special local conditions.

4.3 The ship is required to submit a report to the relevant shore-based authorities through the SafeSeaNet platform or other designated means specified by coastal States. The shore-based authority will acknowledge receipt of the report and distribute it to other authorities within the system.

5 COMMUNICATIONS REQUIRED FOR THE SYSTEM, FREQUENCIES ON WHICH REPORTS SHOULD BE TRANSMITTED AND INFORMATION TO BE REPORTED

5.1 The vessel traffic services, RCC, coastal radio station or others facilities to whom the reports must be sent to are listed in appendix 1.

5.2 ~~The reports required from a ship entering and navigating in the Reporting Area shall begin with the word WETREP and shall contain a two-letter abbreviation for identification of the report (Sailing Plan, Final Report or Deviation Report). Telegrams so prefixed are dispatched free of charge to ships~~. The language used for communication shall be English, using the IMO Standard Marine Communication Phrases.

5.3 The system is based on electronic reporting, using the SafeSeaNet platform.

5.4 Alternative (backup) reporting methods are provided if the SafeSeaNet platform is unavailable, as indicated in appendix 1.

5.~~3~~5 Dependent on the type of report, the following information shall be included as referred to under paragraph 6 of appendix 2:

A: Ship identification (ship name, call sign, IMO identification number and MMSI Number)

B: Date time group

C: Position

E: True course

F: Speed

G: Name of last port of call

I: Name of next port of call with the ETA

P: Oil cargo type(s), quantity, grade(s) and density. If those tankers carry other hazardous cargo simultaneously: the type, quantity and IMO class of that cargo, as appropriate

Q: To be used in cases of defects or deficiency affecting normal navigation

T: Address for the communication of cargo information

W: Number of persons on board

X: Various information applicable for those tankers:

- characteristics and estimated quantity of bunker fuel, for tankers carrying more than 5,000 tonnes of bunker fuel

- navigational status, (for example, under way with engines, restricted in ability to manoeuvre, etc.)

- One or more convention certificates of insurance issued by a party to the conventions and carried on board the ship, providing evidence of existence of insurance for maritime claims, as well as civil liability certificates, as applicable, issued in accordance with:

  .1 the International Convention on Civil Liability for Oil Pollution Damage, 1992 (1992 Civil Liability Convention);

  .2 the International Convention on Civil Liability for Bunker Oil Pollution Damage, 2001 (2001 Bunkers Convention); and,

  .3 the Nairobi International Convention on the Removal of Wrecks, 2007 (2007 Nairobi WRC).

5.4~~6~~ Reports shall be in a format consistent with ~~IMO~~ resolution A.851(20).

5.5~~7~~ Reports shall be free of charge for reporting ships.

6 RELEVANT RULES AND REGULATIONS IN FORCE IN THE AREA OF THE SYSTEM

6.1 Regulations for the Preventing Collisions at Sea

The International Regulations for Preventing Collisions at Sea, 1972 (COLREG~~s~~)~~, as amended,~~ apply throughout the area covered by the system.[2]

6.2 Traffic separation schemes and other routeing measures

6.2.1 The following IMO adopted traffic separation schemes:

West of the Scilly Isles
South of the Scilly Isles
Off Land's End, between Seven Stones and Longships
In Liverpool bay
Neist Point
Sunk
Off Ushant
Off Casquets
In the Strait of Dover and adjacent waters
At Westhinder
North Hinder South

[2] Ships carrying dangerous or polluting goods coming from or bound for a port within the reporting area must comply with the European Community Directive on *Vessel Traffic Monitoring* (2002/59/EC).

Off North Hinder
Off Fastnet Rock
Off Smalls
Off Tuskar Rock
Off Skerries
In the North Channel
Off Finisterre
Off Cape Roca
Off Cape S. Vicente

6.2.2 The following IMO adopted Deep-Water Routes:

Deep-water route leading to the Port of Antifer
Deep-water route forming part of the north-eastbound traffic lane of the Strait of Dover and adjacent waters traffic separation scheme
Deep-water route In the approaches to the River Scheldt
Deep-water route west of the Hebrides

6.2.3 The following IMO adopted Areas to be Avoided:

In the region of the Rochebonne Shelf
In the English Channel and its approaches
In the Dover Strait
Around the F3 station within the separation scheme "In the Strait of Dover and adjacent waters"
At West Hinder
In the region of the Orkney Islands
In the region of the Fair Isle
In the region of the Shetland Islands
Between the Smalls Lighthouse and Grassholme Island
In the region of the Berlengas Islands

6.2.4 The following other IMO adopted routeing measures:

Recommended directions of traffic flow in the English Channel
Recommended routes in the Fair Isle Channel
Recommendations on navigation around the United Kingdom coast

6.2.5 The following IMO adopted Mandatory Ship Reporting Systems:

Off "Les Casquets" and the adjacent coastal area
In the Dover Strait/Pas-de-Calais
Off Ushant
Off Finisterre
Off the coast of Portugal

6.2.6 The following Coastal Vessel Traffic Services (VTS):

Corsen VTS
Dover, ~~Channel Navigation Information Service (CNIS~~)(channel VTS) Sunk VTS
VTS-Scheldt
Finisterre VTS
Gris-Nez VTS
Coast of Portugal VTS

7 SHORE-BASED FACILITIES TO SUPPORT THE OPERATION OF THE SYSTEM

7.1 The vessel traffic services, RCC, coastal radio stations or other~~s~~ facilities to whom the reports must be sent to are listed in appendix 1.

7.2 The vessel traffic services, RCC, coastal radio stations or other~~s~~ facilities that form a part of the service, will at all times be manned.

7.3 All communications facilities

7.3.1 ~~All IMO approved communication methods are accepted and available as detailed in appendix 1~~. The system's primary communication requirements include a reliable Internet connection to ensure continuous, 24/7 access to the vessel web user interface of the European Union Maritime Information and Exchange System (SafeSeaNet), established in accordance with Directive 2002/59/EC as amended. In addition, email and communication via dedicated radio frequencies are also available to serve as backup options.

7.3.2 Shore-based support for system operation includes the SafeSeaNet platform, AIS base stations, VHF facilities, email, and other communication methods listed in appendix 1.

7.3.3 The system includes adequate redundancy to handle typical SafeSeaNet platform failures.

7.4 Staff training and qualification

7.4.1 Personnel are trained according to national and international recommendations. The training of personnel comprises an overall study of the navigation safety measures, the relevant international (IMO) and national provisions with respect to the safety of navigation.

8 PROCEDURES TO BE FOLLOWED IF SHORE-BASED COMMUNICATIONS FAIL

Should the ship be unable to send the report to the nearest coastal radio station or other facility, the report shall be sent to the next-nearest coastal radio station or other facility as listed in appendix 1.

9 MEASURES TO BE TAKEN IF A SHIP FAILS TO COMPLY WITH THE REQUIREMENTS OF THE SYSTEM

The objectives of the system are to initiate SAR and measures to prevent pollution as fast and effective as possible if an emergency is reported or a report from a ship fails to appear, and it is impossible to establish communication with the ship. All means will be used to obtain the full participation of ships required to submit reports. If reports are not submitted and the offending ship can be positively identified, then information will be passed on to the relevant flag State Authorities for investigation and possible prosecution in accordance with national legislation. The mandatory ship reporting system WETREP is for the exchange of information only and does not provide any additional authority for mandating changes in the ship's v~~essel's~~ operations. With regard to convention certificates, this action should be taken only if the flag State is party to the relevant Conventions. This reporting system will be implemented consistent with UNCLOS, SOLAS and other relevant international instruments so that the reporting system will not provide the basis to impinge on a transiting ship's ~~vessel's~~ passage through the Reporting Area.

APPENDIX 1

APPENDIX 2

Western European Ship Reporting System (WETREP)

Rules for drafting of reports

1 Ships on voyage to and from the Western European Reporting Area shall send reports:

.1 on entry into the Reporting Area; or

.2 immediately on departing from a port, terminal or anchorage within the Reporting Area; or

.3 when they deviate from routeing to their original declared destination port/terminal/anchorage or position "for orders" given at time of entry into Reporting Area; or

.4 when deviation from planned route is necessary due to weather or equipment malfunction or where information under entry "Q" is necessary; and

.5 when finally exiting from Reporting Area.

2 Ships need not report if, while on normal passage routeing during transit of Reporting Area, the boundary of the Reporting Area is crossed on other occasions apart from the initial entry and final exit.

3 Upon entering the WETREP Reporting Area, ships will notify the co-ordination centre of the responsible authority of the coastal State participating in the system. The vessel traffic services, RCC, coastal radio station or other facilities to whom the reports must be sent to are listed in appendix 1.

4 Should the ship be unable to send the report to the nearest coastal radio station or other facility, the report shall be sent to the next-nearest coastal radio station or other facility as listed in appendix 1.

5 Each report shall begin with the word WETREP and a 2-letter abbreviation for identification of the report. Messages so prefixed are dispatched free of charge to ships.

6 The reports shall be drawn up in accordance with the following table. The designators A, B, C, E, F, G, I, P, T, W and X are mandatory for a sailing plan report, A, B, C, E and F for a final report, A, B, C, E, F, and I for a deviation report. The designator Q shall also be included at any time where defects including breakdown, damage, deficiencies, circumstances affecting normal navigation should occur within the Reporting Area.

Designator	**Function**	**Text**
Name of system	Code word	"WETREP"
	Type of report: Sailing Plan Final Report Deviation report	One of the following 2-letter identifiers: "SP" (Sailing Plan) "FR" (Final Report - on final leaving the Reporting Area) containing only **A, B, C, E & F** "DR" (Deviation Report) containing only **A, B, C, E, F, and I**
A	Ship	Name and call sign (ship name, call sign, IMO identification number and MMSI number) (e.g.: NONESUCH/KTOI)
B	Date time group corresponding to the position under designator C given in UTC (Co-ordinated Universal Time)	A 6-digit group followed by a Z. The first 2 digits giving date of month, the next 2 digits giving hours and the last 2 digits minutes. The Z indicates that the time is given in UTC (e.g.: 081340Z).
C	Position by latitude and longitude	A 4-digit group giving latitude in degrees and minutes suffixed with N, and a 5-digit group giving longitude in degrees and minutes suffixed with W. (e.g.: 5512N 03420W).
E	Course	True course A 3-digit group (e.g.: 083).
F	Speed	Speed in knots A 2-digit group (e.g.: 14).
G	Name of last port of call	The name of the last port of call (e.g.: New York).
I	Destination and ETA (UTC)	The name of the destination followed by expected time of arrival, expressed as under designator B. (e.g.: Milford Haven 181400Z).
P	Cargo	Oil cargo type(s), quantity, grade(s) and density of heavy crude oil, heavy fuel oil and bitumen and tar. If those tankers carry other hazardous cargo simultaneously: the type, quantity and IMO class of that cargo, as appropriate.
Q	Defect, damage, deficiency, limitations	Brief details of defects including breakdown, damage, deficiencies or other circumstances affecting normal navigation.
T	Address for the communication of cargo information	Name, telephone number and either: facsimile, email address or URL.
W	Total number of persons on board	State the number

X	Various information	Various information applicable for those tankers: .1 characteristics and estimated quantity of bunker fuel, for tankers carrying more than 5,000 tonnes of bunker fuel, .2 navigational status (for example, under way with engines, at anchor, not under command, restricted in ability to manoeuvre, constrained by draught, moored, aground, etc.). .3 One or more convention certificates of insurance issued by a party to the conventions and carried on board the ship, providing evidence of existence of insurance for maritime claims, as well as civil liability certificates, as applicable, issued in accordance with: .1 the International Convention on Civil Liability for Oil Pollution Damage, 1992 (1992 Civil Liability Convention); .2 the International Convention on Civil Liability for Bunker Oil Pollution Damage, 2001 (2001 Bunkers Convention); and, .3 the Nairobi International Convention on the Removal of Wrecks, 2007 (2007 Nairobi WRC).

7 ***Sailing Plan*** *("SP")* to be sent as a first report:

a on entering the Reporting Area as defined in paragraph 2.1.

b immediately on departing from a port located within the Reporting Area.

~~Example:~~
~~Name of station to which the report is being sent~~
~~WETREP – SP~~
~~A. NONESUCH/KTOI~~
~~B. 161520Z~~
~~C. 4105N1115W~~
~~E. 026~~
~~F. 15~~
~~G. RAS TANNURAH~~
~~I. ROTTERDAM 230230Z~~
~~P. 56,000 TONNES HEAVY FUEL OILS~~
~~T. J. Smith, 00 47 22 31 56 10, Facsimile 00 47 22 31 56 11~~
~~W. 23~~
~~X. NONE, NONE~~

8 ***Final Report*** *("FR")* to be sent:

a on leaving the Reporting Area.

b on arrival in a port situated within the Reporting Area.

~~Example:~~
~~Name of station to which the report is being sent~~
~~WETREP – FR~~
~~A. NONESUCH/KTOI~~
~~B. 201520Z~~
~~C. 5145N0238E~~
~~E. 044~~
~~F. 16~~

9 ***Deviation Report*** *("DR")* to be sent:

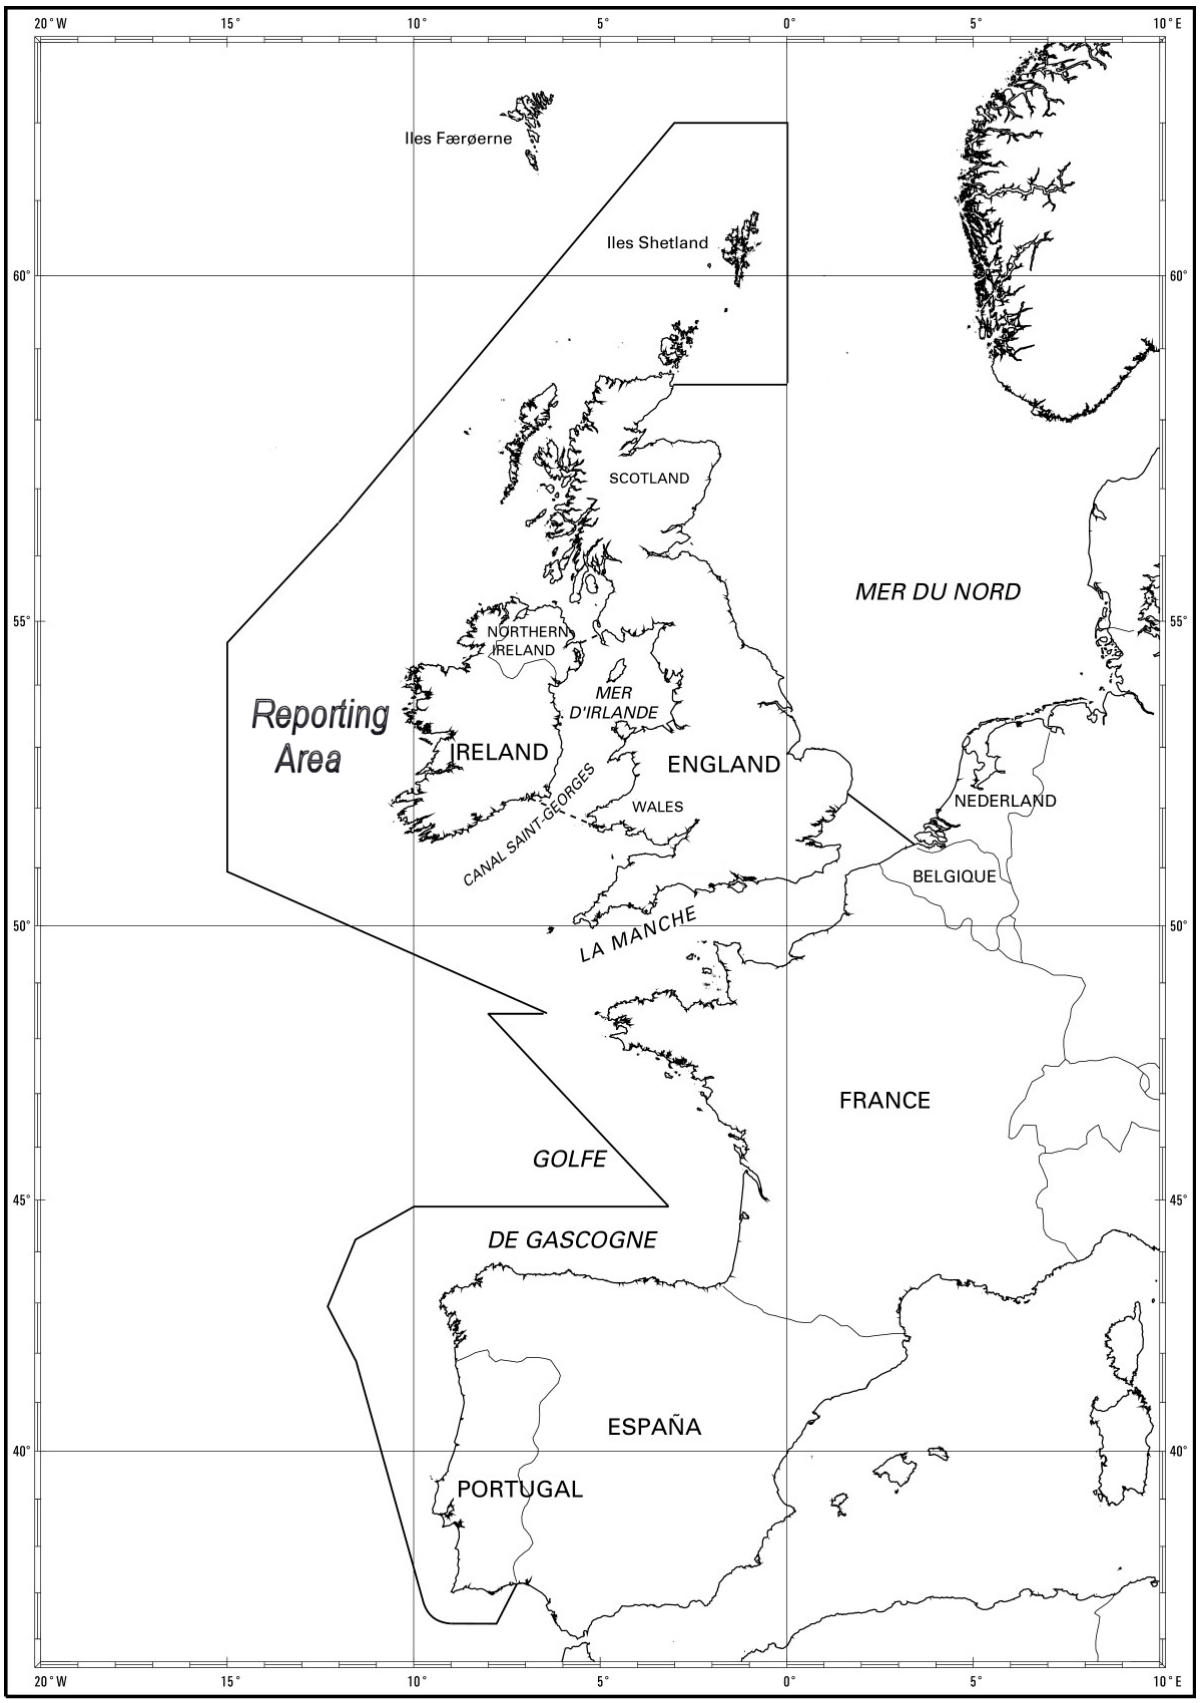
a When they deviate from routeing to their original declared destination/port/terminal/anchorage or position "for orders" given at time of entry into the Reporting Area.

b When deviation from planned route is necessary due to weather or equipment malfunction or a change in navigational status.

~~Example:~~
~~Name of station to which the report is being sent~~
~~WETREP – FR~~
~~A. NONESUCH/KTOI~~
~~B. 201520Z~~
~~C. 4957N0207W~~
~~E. 073~~
~~F. 14~~
~~I. ROTTERDAM 270230Z~~
~~X. NONE, SATISFACTORY~~

APPENDIX 3

Chartlet



ANNEX 2

SUMMARY

1 Ships required to report

In the reporting system WETREP, every kind of oil tanker of more than 600 tonnes deadweight, carrying a cargo of:

.1 heavy crude oil, meaning crude oils with a density at 15°C of higher than 900 kg/m^3;

.2 heavy fuel oils, meaning fuel oils with a density at 15°C of higher than 900 kg/m^3, or a kinematic viscosity at 50°C of higher than 180 mm^2/s;

.3 bitumen and tar and their emulsions.

2 Position for submitting reports

Ships on voyage to and from the Western European Reporting Area shall send reports:

.1 on entry into the Reporting Area; or

.2 immediately on departing from a port, terminal or anchorage within the Reporting Area; or

.3 when they deviate from routeing to their original declared destination port/terminal/anchorage or position "for orders" given at time of entry into the Reporting Area; or

.4 when deviation from planned route is necessary due to weather or equipment malfunction or a change in the navigational status; and

.5 when finally exiting from the Reporting Area.

Ships need not report if, while on normal passage routeing during transit of the Reporting Area, the boundary of the Reporting Area is crossed on other occasions apart from the initial entry and final exit.

3 Reference chart

United Kingdom Hydrographic Office chart No.4011 (World Geodetic System 1984, Datum (WGS 84)).

4 Reporting format

System identifier: WETREP

Data to be transmitted in WETREP:

A: Ship identification (ship name, call sign, IMO identification number and MMSI Number)

B: date time group

C: Position

E: True course

F: Speed

G: Name of last port of call

I: Name of next port of call with ETA

P: Oil cargo type(s), quantity, grade(s) and density (If those tankers carry other hazardous cargo simultaneously: the type, quantity and IMO class of that cargo, as appropriate)

Q: To be used in cases of defects or deficiency affecting normal navigation

T: Address for the communication of cargo information

W: Number of persons on board

X: Various information applicable for those tankers:

- characteristics and estimated quantity of bunker fuel, for tankers carrying more than 5,000 tonnes of bunker fuel
- navigational status (for example, under way with engines, restricted in ability to manoeuvre, etc.)
- One or more convention certificates of insurance issued by a party to the conventions and carried on board the ship, providing evidence of existence of insurance for maritime claims, as well as civil liability certificates, as applicable, issued in accordance with:

  .1 the International Convention on Civil Liability for Oil Pollution Damage, 1992 (1992 Civil Liability Convention);

  .2 the International Convention on Civil Liability for Bunker Oil Pollution Damage, 2001 (2001 Bunkers Convention); and,

  .3 the Nairobi International Convention on the Removal of Wrecks, 2007 (2007 Nairobi WRC).

5 Authority receiving the report

5.1 Upon entering the WETREP Reporting Area, ships will notify the coordination centre of the responsible authority of the coastal State participating in the system. The vessel traffic services, RCC, coastal radio station or others facilities to whom the reports must be sent to are listed in appendix 1.

5.2 Should the ship be unable to send the report to the nearest coastal radio station or other facility, the report shall be sent to the next-nearest coastal radio station or other facility as listed in appendix 1.

6 Communication

~~Reports may be sent by any modern communication form, including Inmarsat-C, telefax and e-mail as appropriate.~~ Reports are to be submitted electronically via the SafeSeaNet platform, which serves as the primary reporting tool. The SafeSeaNet web user interface is used for submitting and reviewing WETREP reports, as well as consulting responses from coastal State authorities. Using SafeSeaNet, vessels can access relevant ship information and make use of existing data when preparing new reports. The SafeSeaNet web user interface is available at: https://wetrep.emsa.europa.eu.[3] In addition, email and communication via dedicated radio frequencies are also still available to serve as backup options.

---

[3] The interface will be activated when the measure is approved and in force.
