ROUTEING MEASURES AND SHIP REPORTING SYSTEMS

Amendment of the existing mandatory ship reporting system "*Off the south and southwest coast of Iceland (TRANSREP)*"

Submitted by Iceland

SUMMARY

Executive summary:	This document contains a proposal for minor amendments to the existing ship reporting system "*Off the south and southwest coast of Iceland (TRANSREP)*".
Strategic direction, if applicable:	7
Output:	7.22
Action to be taken:	Paragraph 8
Related documents:	Resolutions MSC.433(98) and A.851(20); MSC.1/Circ.1060, as amended, and resolution MSC.250(83), as amended by resolution MSC.316(88)

Introduction

1 This document contains a proposal for minor amendments to an existing reporting system, as indicated in the annex, in and around the south and southwest coast of Iceland (resolution MSC.250(83), as amended by resolution MSC.316(88)).

2 The amendments pertain specifically to the information to be provided under designator X "miscellaneous", where information about maritime insurance would be required. The proposal was drafted based on the information provided, in particular for safety of life at sea, maritime safety and the protection of the marine environment for the sea areas concerned.

3 The amendment takes into account the Commission Delegated Directive(EU) 2025/811 of 19 February 2025, amending annex I to Directive 2002/59/EC of the European Parliament and of the Council as regards information to be notified to ship reporting systems, as transposed by Icelandic regulation 1413/2025 "Reglugerð um breytingu á reglugerð nr. 80/2013 um vaktstöð siglinga og eftirlit með umferð skipa".

Summary

4 The proposed minor amendments aim to enhance the ability of Iceland to access critical information, including maritime insurance details, necessary for efficient and enhanced monitoring and management of maritime traffic, for Iceland to be better prepared to protect the marine environment. The amendment seeks to facilitate electronic ship-to-shore information exchange and automated ship reporting processes as much as possible, and to reduce ships' administrative burdens while improving navigation monitoring by usage of modern technologies and tools (see NCSR 11/INF.8 for information about the technical approach). While IMO resolutions establishing ship reporting systems (SRS) define the general principles and procedures for SRS, for Member States of the European Union (EU) and the European Economic Area (EEA), information from such reports is exchanged via the Union Maritime Information and Exchange System (SafeSeaNet-SSN), providing vessel traffic monitoring support, as Iceland is a Member of said system, through the EEA Agreement.

5 The amendment considers the evolution of information-sharing and requires the use of electronic means for sending the information required.

6 Other amendments are technical or editorial in nature.

7 The demonstrated need for the TRANSREP system was submitted when the system was first proposed and established, by resolution MSC.250(83), as amended by resolution MSC.316(88).

Action requested of the Sub-Committee

8 The Sub-Committee is invited to consider the proposal and recommend the proposal to the Maritime Safety Committee for adoption.

***

ANNEX

DRAFT MSC RESOLUTION

AMENDMENTS TO THE EXISTING MANDATORY SHIP REPORTING SYSTEM "OFF THE SOUTH AND SOUTHWEST COAST OF ICELAND (TRANSREP)"

THE MARITIME SAFETY COMMITTEE,

RECALLING Article 28(b) of the Convention on the International Maritime Organization concerning the functions of the Committee,

RECALLING ALSO regulation V/11 of the International Convention for the Safety of Life at Sea, 1974 (SOLAS Convention), in relation to the adoption of ship reporting systems by the Organization,

RECALLING FURTHER resolution A.858(20) resolving that the function of adopting ship reporting systems shall be performed by the Committee on behalf of the Organization,

TAKING INTO ACCOUNT the guidelines and criteria for ship reporting systems adopted by resolution MSC.433(98),

HAVING CONSIDERED the recommendations of the Sub-Committee on Navigation, Communications and Search and Rescue, at its [...] session,

1 ADOPTS, in accordance with SOLAS regulation V/11, the revised ship reporting system *Off the south and southwest coast of Iceland (TRANSREP)*, as set out in the annex;

2 DECIDES that the above-mentioned amended mandatory ship reporting system will enter into force at 0000 hours UTC on […];

3 REQUESTS the Secretary-General to bring this resolution and its annex to the attention of Contracting Governments to the SOLAS Convention and to Members of the Organization;

4 REVOKES resolutions MSC.250(83) and MSC.316(88) as of […].

ANNEX

MANDATORY SHIP REPORTING SYSTEM
"OFF THE SOUTH AND SOUTHWEST COAST OF ICELAND (TRANSREP)"

1 Categories of ships required to participate in the system

1.1 Ships of the following categories are required to participate in the system:

.1 ships calling at ports located within the eastern ATBA off the south and southwest coast of Iceland;

.2 ships of less than 5,000 gross tonnage permitted to transit the eastern ATBA south of latitude 63° 45′ N when engaged on voyages between Icelandic ports and not carrying dangerous or noxious cargoes in bulk or in cargo tanks;

.3 ships of up to 30.000 ~~20,000~~ gross tonnage, en route to or from Faxaflói Bay, which neither carry dangerous goods nor noxious materials in bulk or cargo tanks and which may transit the Eastern ATBA south of latitude 63° 45´ N; ~~and~~

.4 passenger ships of unlimited size, which may only transit the inner route (Húllid Passage) and the Eastern ATBA during the period 1 May to 1 October; and

.5 ships not calling at Icelandic ports but passing through the MRS.

Pursuant to SOLAS 1974, the mandatory ship reporting system does not apply to any warship, naval auxiliary, coastguard vessel, or other vessel owned or operated by a contracting government and used, for the time being, only on government non-commercial service. However, such ships are encouraged to participate in the reporting system. The mandatory ship reporting system does not apply to fishing vessels with fishing rights within Iceland's exclusive economic zone (EEZ) and research vessels.

2 Geographical coverage of the system and the number and edition of the reference charts used for the delineation of the system

The reporting system covers the proposed ATBA (the eastern area) off the south and southwest coast of Iceland located entirely within Icelandic territorial waters, and is bounded by lines connecting the following geographical positions:

(25)	Dyrhólaey Light	63° 24′.13 N	019° 07′.83 W
(24)	S of Surtsey Island	63° 10′.00 N	020° 38′.00 W
(23)	S of Reykjanes Point	63° 40′.90 N	022° 40′.20 W
(22)	SW of Reykjanes Point	63° 45′.80 N	022° 44′.40 W
(21)	Húllid Passage SE part	63° 47′.00 N	022° 47′.60 W
(20)	Húllid Passage NE part	63° 48′.00 N	022° 48′.40 W
(19)	SW of Litla Sandvik	63° 49′.20 N	022° 47′.30 W
(18)	Off Sandgerdi	64° 01′.70 N	022° 58′.30 W
(8)	NW of Gardskagi Point	64° 07′.20 N	022° 47′.50 W
(9)	N of Gardskagi Point	64° 07′.20 N	022° 41′.40 W
(17)	Gardskagi Light	64° 04′.92 N	022° 41′.40 W

The reference chart, which includes all the area of coverage for the system, is Icelandic chart No.31 (INT 1103) *Dyrhólaey – Snæfellsnes* (~~May 2008 edition~~ 01/2020), based on datum WGS 84.

3 Format, contents of report, times and geographical positions for submitting reports, Authority to whom reports must be sent and available services

~~The ship report, short title "TRANSREP", shall be made to the shore-based Authority, Icelandic Maritime Traffic Service (MTS), located in Reykjavík. Reports should be made using VHF voice transmissions.~~

The communication requirements for implementing the reporting requirement are stable Internet connection enabling 24/7 access to the ship web user interface of the European Union Maritime Information and Exchange system (SafeSeaNet). Email as well as normal communication on dedicated radio frequencies should only be used as a last resort. Ships that do not have an Internet connection or access to email may be requested to send their insurance certificates by other means available.

3.1 *Format*

The ship report to the shore-based Authority shall be in accordance with the format shown in paragraph 5. The information requested from ships is derived from the standard reporting format and procedures set out in paragraph 2 of the appendix to resolution A.851(20).

3.2 *Content*

The report required from a ship to the shore-based Authority contains only information which is essential to meet the objectives of the system:

Information considered to be essential:

A Name of ship, call sign and IMO number

C *or* D Position (latitude and longitude or in relation to a landmark)

E Course

F Speed

G Port of departure

H Date, time and point of entry into system

I Port of destination

K Date, time and point of exit from system or departure from a harbour within the ATBA

L Intended track within the ATBA

X Miscellaneous:

.1 characteristics and estimated quantity of bunker fuel, for ships of more than 1,000 gross tonnage;

.2 navigational status;

.3 one or more insurance certificates issued by its provider and carried on board the ship, providing evidence of the existence of insurance for maritime claims in accordance with article 171a of the Maritime Act No. 34/1985, as well as civil liability certificates issued in accordance with:

.1 the International Convention on Civil Liability for Oil Pollution Damage, 1992, as amended (1992 Civil Liability Convention);

.2 the International Convention on Civil Liability for Bunker Oil Pollution Damage, 2001 (2001 Bunkers Convention); and

.3 the Nairobi International Convention on the Removal of Wrecks, 2007 (2007 Nairobi WRC).

In the event of defect, pollution or goods lost overboard, additional information may be requested.

3.3 *Geographical position for submitting reports*

Ships entering the ATBA shall report to the MTS their estimated time of crossing the area limits, specified in paragraph 2, 4 hours prior to entering the area or when departing from harbours in Faxaflói Bay. Ships leaving harbours within the ATBA shall report on departure.

3.4 *Authority*

The shore-based Authority is the Icelandic Maritime Traffic Service (MTS), which is operated by the Icelandic Coast Guard.

4 Information to be provided to ships and procedures to be followed

Detected and identified ships are monitored by AIS, which in no way releases their master from his responsibility for safe navigation.

Following the reception of a report, the Maritime Traffic Service (MTS) can, on request, provide:

.1 information on navigational conditions; and

.2 information on weather conditions.

5 Means of communication and information to be submitted
~~Radiocommunication required for the system, frequencies on which reports should be transmitted and information to be reported~~

~~.1 TRANSREP will be based on VHF voice radiocommunications.~~

~~.2 The call to the shore-based Authority shall be made on VHF channel 70 (16).~~

~~.3 However, a ship which cannot use VHF channel 70 (16) in order to transmit the reports should use MF DSC or INMARSAT.~~

~~.4 The language used for communication shall be English, using the IMO Standard Marine Communication Phrases, where necessary.~~

.1 Reports shall primarily be submitted through electronic means, through the SafeSeaNet system or via email.

.2 If a vessel is unable to use electronic means, reports shall be submitted to the shore-based Authority on English VHF channel 70 (16).

~~5.~~3 Information to be reported:

A Name of ship, call sign and IMO number

C or D Position (latitude and longitude or in relation to a landmark)

E Course

F Speed

G Port of departure

H Date, time and point of entry into system

I Port of destination

K Date, time and point of exit from system or departure from a harbour within the ATBA

L Intended track within the ATBA

X Miscellaneous:

.1 characteristics and estimated quantity of bunker fuel, for ships of more than 1 000 gross tonnage;

.2 navigational status;

.3 one or more insurance certificates issued by its provider and carried on board the ship, providing evidence of the existence of insurance for maritime claims in accordance with article 171a of the Maritime Act No. 34/1985, as well as civil liability certificates issued in accordance with:

.1 the International Convention on Civil Liability for Oil Pollution Damage, 1992, as amended (1992 Civil Liability Convention);

.2 the International Convention on Civil Liability for Bunker Oil Pollution Damage, 2001 (2001 Bunkers Convention); and

.3 the Nairobi International Convention on the Removal of Wrecks, 2007 (2007 Nairobi WRC).

6 Rules and regulations in force in the areas of the system

Relevant laws in force include domestic legislation and regulations to implement the Convention on the International Regulations for Preventing Collisions at Sea, 1972, the International Convention for the Safety of Life at Sea, 1974, and the International Convention for the Prevention of Pollution from Ships, 73/78.

7 Shore-based facilities to support operation of the system

The Icelandic Maritime Traffic Service (MTS):

- The MTS is equipped with AIS covering the whole of the ATBA;
- VHF, MF, HF and INMARSAT communication equipment;
- Telephone, telefax and email communication facilities; and
- Personnel operating the system: The MTS is manned by coastguard personnel on a 24-hour basis.

8 Alternative communication if the communication facilities of the shore-based Authority fail

TRANSREP is planned with a sufficient system redundancy to cope with normal equipment failure.
