ROUTEING MEASURES AND SHIP REPORTING SYSTEMS

Amendments to the existing mandatory ship reporting system "In the Strait of Bonifacio" (BONIFREP)

Submitted by France and Italy

SUMMARY

Executive summary:	This document contains a proposal to amend the existing ship reporting system *In the Strait of Bonifacio* (BONIFREP), as adopted by resolution MSC.73(69).
Strategic direction, if applicable:	7
Output:	7.22
Action to be taken:	Paragraph 22
Related documents:	Resolutions A.851(20), as amended; MSC.73(69); MSC.433(98); A.766(18); MEPC.204(62); A.1184(33); MSC/Circ.1060, as amended; MSC.1/Circ.1608; NCSR 12/3, NCSR 12/3/3; NCSR 11/INF.8 and NCSR 12/20/Add.1

Introduction

1 This document contains a proposal by France and Italy to amend the existing mandatory ship reporting system *In the Strait of Bonifacio* (BONIFREP), as adopted by resolution MSC.73(69).

2 The proposal was drafted based on close expert cooperation of the submitting States during dedicated BONIFREP coordination meetings.

3 The annex contains the suggested amendments to the BONIFREP system. All changes are shown using manual grey shading and strike-out format applied to resolution MSC.73(69), annex 2.

Summary

4 The existing BONIFREP system entered into force on 1 December 1998, based on the ship reporting requirements and coastal States capabilities available at that time. Since then, significant advancements have been made in ship monitoring and maritime data exchange technologies. Despite this technological progress, BONIFREP has relied since the beginning largely on manual position reporting by VHF voice or other traditional communication means at designated reporting points/lines. This approach is now outdated and places an unnecessary burden on both ships and coastal authorities. The use of VHF voice should be limited to essential communication, such as for safety, distress, or abnormal navigation situations.

5 The proposed amendment to the BONIFREP system aims to automate the reporting procedure for ships as much as possible. This will lead to a reduction in administrative burdens, while at the same time it will improve navigation monitoring by the use of modern technology already tested and agreed for the mandatory ship reporting system in the Adriatic Sea (ADRIREP) at NCSR 12.

6 Furthermore, the amendment to the BONIFREP system pertains also to the information to be provided under the new designators G, I, T, W and X "miscellaneous", where information about port of departure, port of destination, total number of persons on board, characteristics and estimated quantity of bunker fuel and details related to maritime insurance would be required, respectively. Since 2009, Directive 2009/20/EC* on the insurance of shipowners for maritime claims has required notification of proof of marine insurance for any ships, irrespective of the flag, when operating in ports or in the territorial sea of EU Member States. Making the information described available will be crucial, particularly in relation to the safety of life at sea, maritime safety, and the protection of the marine environment within the BONIFREP operational area. Participation in the system will be limited exclusively to those States participating in the BONIFREP system.

Marine environmental considerations

7 The ship reporting system BONIFREP in the narrow waters of the Strait of Bonifacio plays an important role in navigational safety and pollution prevention, and as an Associated Protective Measure (APM) within the Particularly Sensitive Sea Area (PSSA) of the Strait of Bonifacio adopted on 15 July 2011 by the International Maritime Organization.

8 Ship reporting systems play a vital role in ensuring the safety of life at sea, maritime safety, operational efficiency, and environmental protection. The increase in transport and the movement of hazardous cargoes, such as oil, elevates the risk of maritime incidents and potential environmental harm along European coastlines. These circumstances highlight the necessity for stringent maritime insurance requirements, as vessels lacking adequate insurance represent a significant threat to both safety and environmental standards.

9 The International Conventions on Civil Liability for Oil Pollution Damage (1992), Bunker Oil Pollution Damage (2001), and Wreck Removal (2007) require ships to carry insurance certificates from their flag State or another State party confirming they meet financial security requirements.

* Directive 2009/20/EC of 23 April 2009 on the insurance of shipowners for maritime claims. O.J. L131/128 of 28 May 2009.

10 These Conventions require ships to hold sufficient insurance coverage and provide a convention certificate, signed by the ship's flag State or another State party, confirming strong financial backing for potential oil spill damages.

11 The maritime insurance requirements are directly connected to the safety and protection of the marine environment as part of the broader international framework for safety and pollution prevention. Flag States are responsible for ensuring that ships under their flags comply with statutory requirements, including insurance, which is necessary for transporting cargo such as dangerous or polluting goods. Failure to meet these requirements results in a violation of regulations and can disrupt the established system balance.

12 The proposed amendment would require vessels to provide evidence of insurance for maritime claims and civil liability certificates issued by the flag State. This measure aims to improve enforcement of marine safety and environmental protection while maintaining the rights of coastal States to seek legal remedies for damages. Without clear vessel ownership and insurance, these protections may fail, potentially leaving coastal States responsible for spill-related damages.

Cooperation between States

13 France and Italy share common interests in this area. That is why the system was created in 1998. A Franco-Italian technical agreement on the operational procedures to be implemented for the vessel reporting system in the Strait of Bonifacio (Bonifacio traffic) was signed in Rome on 3 June 1999. The general monitoring of maritime traffic in the Strait of Bonifacio is the subject of a close cooperation between the French and Italian maritime authorities. Several working meetings between the French and the Italian maritime authorities have been held since 2024 to modernize the BONIFREP participation modalities.

Communication required for the system

14 The main communication requirement for implementing the new reporting modalities is a stable internet connection enabling 24/7 access to the ship web user interface of the European Union Maritime Information and Exchange system (SafeSeaNet). This will be considered as the primary method of reporting. All other forms of communications, such as email and communications on dedicated VHF voice radio frequencies, can still be used as a back-up to the primary means of reporting. Alternate (backup) methods of reporting may be used in case the SafeSeaNet system is not available, as indicated in appendix 2.

Shore-based facilities to support the operation of the system

15 The shore-based facilities that support the operation of the system include the SafeSeaNet system, an integrated system of AIS base stations, VHF radio shore-based facilities, email and other communication methods as specified in appendix 2 to the annex of the revised resolution.

16 The shore-based facilities are staffed around the clock by personnel trained and certified according to applicable national and international regulations to support the operation of the proposed system.

17 Cyber risk management is implemented in compliance with national and international regulations and standards.

Details regarding the appropriate procedures to be followed in the event of a failure of the shore-based Authority's communication facilities.

18 The system incorporates adequate redundancy measures to effectively address typical system failures of the shore-based Authority's communication facilities.

Measures to be taken if a ship fails to comply

19 The primary aim of the system is to facilitate safe navigation and to safeguard the marine environment by enabling an exchange of information between vessels and shore authorities. Should a vessel fail to submit required reports and be positively identified, relevant details will be communicated to the appropriate flag State authorities for further investigation and potential prosecution, in accordance with the international conventions and the national legislation in force. Additionally, this information will also be passed to port State control inspectors.

20 As concerns liability certificates, such actions should be undertaken solely when the flag State is a party to the applicable Conventions.

Relevant rules and regulations

21 The relevant rules and regulations in force in the in the Strait of Bonifacio Particularly Sensitive Sea Area are the existing mandatory ship reporting systems and a recommended two-way route. The original resolution was adopted on 19 May 1998, therefore the proposed review of the relevant rules and regulations can be considered as a natural update to the system. The International Regulations for Preventing Collisions at Sea (COLREG) are applicable throughout the whole area covered by the system.

Action requested of the Sub-Committee

22 The Sub-Committee is invited to consider the proposed amendments to the existing ship reporting system *In the Strait of Bonifacio* (BONIFREP), as set out in the annex, with a view to adoption by the Maritime Safety Committee with an effective date of implementation of six months after adoption.

***

ANNEX

DRAFT MSC RESOLUTION

**ADOPTION OF AMENDMENTS TO
THE EXISTING MANDATORY SHIP REPORTING SYSTEM
"IN THE STRAIT OF BONIFACIO" (RESOLUTION MSC.73(69), ANNEX 2)**

THE MARITIME SAFETY COMMITTEE,

RECALLING Article 28(b) of the Convention on the International Maritime Organization concerning the functions of the Committee,

RECALLING ALSO regulation V/11 of the International Convention for the Safety of Life at Sea, 1974 (SOLAS Convention), in relation to the adoption of mandatory ship reporting systems by the Organization,

RECALLING FURTHER resolution A.858(20), resolving that the function of adopting ship reporting systems shall be performed by the Committee on behalf of the Organization,

TAKING INTO ACCOUNT the *Guidelines and criteria for ship reporting systems* adopted by resolution MSC.433(98),

HAVING NOTED that the Marine Environment Protection Committee (MEPC) at its sixty-second session designated the Strait of Bonifacio as a Particularly Sensitive Sea Area (PSSA), by resolution MEPC.204(62),

HAVING CONSIDERED the recommendations of the Sub-Committee on Navigation, Communications and Search and Rescue, at its […] session,

1 ADOPTS in accordance with SOLAS regulation V/11, the revised mandatory ship reporting system *In the Strait of Bonifacio Particularly Sensitive Sea Area*, as set out in the annex to the present resolution;

2 DECIDES that the said revised amended mandatory ship reporting system *In the Strait of Bonifacio Particularly Sensitive Sea Area* will enter into force on […];

3 REQUESTS the Secretary-General to bring this resolution and its annex to the attention of Member States and Contracting Governments to the 1974 SOLAS Convention;

4 REVOKES annex 2 to resolution MSC.73(69) as from 0000 hours UTC on […].

ANNEX ~~2~~

DESCRIPTION OF THE MANDATORY SHIP REPORTING SYSTEM IN THE STRAIT OF BONIFACIO PARTICULARLY SENSITIVE SEA AREA

The mandatory ship reporting system in the Strait of Bonifacio (BONIFREP) is established in the Strait of Bonifacio Particularly Sensitive Sea Area.

1 CATEGORIES OF SHIPS REQUIRED TO PARTICIPATE IN THE SYSTEM

Ships of 300 gross tonnage and over are required to participate in the system.

2 GEOGRAPHICAL COVERAGE OF THE SYSTEM – REFERENCE CHART

The reporting system covers a circular area with a radius of 20 (twenty) nautical miles centred on Bonifacio, as shown in appendix 1. The reference chart is the French Chart No.7024 of the SHOM (Hydrographic and Oceanographic Service of the French Navy), International chart No.3350.

3 FORMAT AND CONTENTS OF THE REPORT, TIMES AND GEOGRAPHICAL POSITIONS FOR SUBMITTING THE REPORT, THE AUTHORITY TO WHOM REPORTS SHOULD BE SENT, AND AVAILABLE SERVICES

3.1 Procedures for reporting

3.1.1 Prior to entering the ship reporting area, ships can fulfil most of the reporting requirements of the reporting system (i.e. Sailing Plan report) using SafeSeaNet web user interface for electronic ship reporting. The details about reporting are given in appendix 3 and contact information is available in appendix 2.

3.1.2 At the report line of entry a VHF voice communication must be established with Bonifacio Traffic to communicate name of the ship (part of designator A) and to inform whether BONIFREP reporting obligations were already fulfilled in accordance with 3.1.1 or 3.1.5.

3.1.3 The use of correct and updated AIS information can simplify the reporting requirements for designators A, B, C, E, F, I, O, W and X (part of). The information will be automatically filled by the system in the SafeSeaNet web user interface for electronic ship reporting.

3.1.4 Designators Q and R, if applicable, shall be communicated via VHF voice to Bonifacio Traffic either when entering the area, or at the time an event occurs during the transit through BONIFREP operational area.

3.1.5 To prevent overloading of the VHF channels for reporting by voice communications, and to avoid interference with essential navigational duties, and by this hampering the safety of navigation in the area, a ship unable to accomplish the reporting requirements using SafeSeaNet web user interface can send BONIFREP report via email prior to entering the ship reporting area.

3.~~1~~2 **Content**

3.2.1 The **Sailing Plan (SP)** report ~~required~~ shall include:

- information considered essential, such as:
    - the name of the ship, her callsign ~~or~~ and IMO identification number (letter A)
    - time and position (letters ~~C~~B ~~or~~ and ~~D~~C)
    - course and speed (letters E and F)
    - port of departure (letter G)
    - port of destination and estimated time of arrival (letter I)
    - draught (letter O)
    - contact information (shipowner or representative) for the communication of cargo information (letter T)
    - total number of persons on board (letter W)
    - letter X:
        - navigational status;
        - characteristics and estimated quantity of bunker fuel;
        - one or more convention certificates of insurance issued by a party to the conventions and carried on board the ship, providing evidence of existence of insurance for maritime claims, as well as civil liability certificates, as applicable, issued in accordance with:
            - the International Convention on Civil Liability for Oil Pollution Damage, 1992, as amended (1992 Civil Liability Convention);
            - the International Convention on Civil Liability for Bunker Oil Pollution Damage, 2001 (2001 Bunkers Convention); and
            - the Nairobi International Convention on the Removal of Wrecks, 2007 (2007 Nairobi WRC).
    - additional information, if appropriate
    - cargo (in case of transport of petroleum products, dangerous or polluting substances) (letter P)
    - defects or damage (letter Q)
    - pollution/dangerous goods lost overboard (letter R)

In addition, in accordance with provisions of SOLAS and MARPOL Conventions, ships must report information on any defect, damage, deficiency or limitations (under designator Q) as well as, if necessary, information relating to pollution incidents or loss of cargo (under designator R).

Possession of this information enables the operators to broadcast safety messages to other ship traffic and to ensure more effective tracking of the trajectories of the ships concerned.

Information on Liability certificates may be presented by the company as defined by SOLAS regulation IX/1.2.

3.2.2 The **Position Report (PR)** shall include:

- name of the ship, call sign and IMO identification number (letter A)
- bearing and distance from the Sud Lavezzi buoy (letter D)
- next course of the ship (letter E)

3.3 **Geographical position for submitting reports**

Ships shall transmit their reports (Sailing Plan) on entering the precautionary areas defined in the documents about routeing measures in the Strait of Bonifacio, or when passing the following lines:

- East Bound:
  - A line linking the beacon of Cap De Fano in Corsica to geographical position
    41° 19'.18 N 009° 06'.51 E
    (West end of the North limit of the two-way route)
  - A line linking the beacon of Capo Testa in Sardinia to geographical position
    41° 16'.75 N 009° 06'.18 E
    (West end of the South limit of the two-way route).
- West Bound
  - A line linking Pointe De Rondinara in Corsica to geographical position
    41° 22'.55 N 009° 22'.38 E
    (East end of the North limit of the two-way route)
  - A line linking Punta Galera in Sardinia to geographical position
    41° 21'.58 N 009° 23'.30 E
    (East end of the South limit of the two-way route)

Ships shall transmit the Position Report (PR) using VHF voice communication when passing south of the Sud Lavezzi buoy (43° 18'35.82'' N 009°15'15.06'' E).

3.~~2~~4 **Recipient of report**

The shore-based authorities are La Maddalena Coast Guard Station (Sardinia, Italy) and Pertusato French ~~Naval~~ Navy Signal Station, (Corsica, France), common call sign: **Bonifacio Traffic**. Additional details are given in appendix 2.

3.5 Available means of communication

3.5.1 Ships participating in the system shall submit reports by electronic means using the SafeSeaNet system as the primary means of reporting, or via the alternative means assigned by the competent shore-based authority, as specified in appendix 2.

3.5.2 By using SafeSeaNet, ships will have access to the information already available about their ship and can reuse available information when creating a new report.

3.5.3 The SafeSeaNet web user interface for electronic ship reporting can be accessed at: https://bonifrep.emsa.europa.eu*.

4 INFORMATION TO BE PROVIDED TO SHIPS AND PROCEDURES TO BE FOLLOWED

Detected and identified ships are monitored by radar, which in no way releases their masters from their responsibility for safe navigation.

Following receiving a report, **Bonifacio Traffic** will provide:

- information on navigational conditions (status of aids to navigation, presence of other ships and their position at the moment of contact); and
- information on weather conditions.

The shore-based authority shall acknowledge receipt of the reports submitted by ships either through the SafeSeaNet platform or by other designated means as specified by the on-duty shore-based authority, and will make it available to the off-duty one.

5 ~~RADIO~~COMMUNICATION~~S~~ REQUIRED FOR THE SYSTEM, FREQUENCIES ON WHICH REPORTS SHOULD BE TRANSMITTED AND INFORMATION TO BE REPORTED

5.1 The BONIFREP ship reporting system is primarily based on electronic reporting using the SafeSeaNet system.

5.2 Alternate (backup) methods of reporting may be used in case the SafeSeaNet system is not available, as indicated in appendix 2.

5.~~1~~3 The radiocommunication equipment required for the system is a VHF transceiver. Ship reports shall be transmitted by voice on VHF channel 10, back up VHF channel 16, both permanently watched by the station. ~~An IMO circular will provide for another back up VHF channel, if necessary, after 1 February 1999. Use of automatic identification system will be implemented in accordance with IMO decisions.~~

5.~~2~~4 The report required from a ship is mentioned in paragraphs 3.~~1~~2 and 3.3 above and in the appendix 3 "Summary". The language used shall be English using the IMO Standard Marine Communication Phrases as far as applicable~~ or languages indicated in nautical publications~~.

5.~~3~~5 Information of commercial confidentiality may be transmitted by non-verbal means (website for electronic ship reporting or email as indicated in appendix 2). ~~Detail of fax call number to be published in nautical information documents.~~

6 RULES AND REGULATIONS IN FORCE IN THE AREA OF THE ROUTEING SYSTEM APPLICABLE TO THE STRAIT OF BONIFACIO

6.1 The international regulations for preventing collisions at sea (COLREGs) are applicable throughout the area of coverage of the system.

* The interface will be activated when the measure is approved and in force.

6.2 ~~The IMO~~ Resolution A.766(18) about navigation in the Strait of Bonifacio, adopted on 4 November 1993, remains in force as far as it recommends each flag State to prohibit or at least strongly discourage the transit by certain categories of ships (operative paragraph 1). Its ship reporting provisions are replaced by those of the present instrument.

6.3 Vessels navigating in the Strait shall exercise full diligence and regard for the requirements of the existing recommended two-way route in the Strait of Bonifacio. Owing to the narrowness of the Strait, masters of vessels shall ensure that an appropriate monitoring of the ship's route is done on board in order to avoid groundings and collisions.

6.4 Masters of vessels passing through the Strait are recommended to make use of the services of a qualified pilot.

6.~~3~~5 The regulation (arrêté) of the Préfet maritime for the Mediterranean region n° ~~23/83~~ 149/2021 dated ~~6 May 1983~~ 24 June 2021 rules navigation in the approaches of the French coast in order to prevent accidental marine pollution, for ships carrying hazardous or polluting cargoes. This instrument has the following provisions:

.1 for ships intending to enter French territorial waters, mandatory ship reporting with a six-hour advance warning. In addition to information concerning the identity of the ship, the report must specify the place and time of entry into French waters, the port arrived from and the destination, the cargo and the status of manoeuvrability and navigational capacities;

.2 mandatory watch on VHF channel 16 while travelling through territorial waters; and

.3 mandatory reporting of any damage occurring at less than 50 miles from the Franch coast.

6.~~4~~6 French regulations (arrêté) of the Préfet maritime n°~~1/83~~ 147/2018 dated ~~15 February 1983~~ 09 July 2018 ~~and 7/93 dated 5 March 1993~~ and Italian decree of the Minister of Merchant Marine dated 26 February 1993 prohibit transit through the Strait of Bonifacio for French and Italian ships carrying oil products or hazardous goods. They will remain in force.

7 SHORE-BASED FACILITIES TO SUPPORT THE OPERATION OF THE SYSTEM

7.1 Stations will be equipped with radar installations assisted by a computer covering the whole area.

7.2 Stations will be equipped with duplicated VHF equipment.

7.3 Stations are linked to the national shore-based AIS network and can continually monitor AIS information on ships such as identity and position.

7.4 The system's primary communication requirements include a reliable internet connection to ensure continuous, 24/7 access to the vessel web user interface of the European Union Maritime Information and Exchange System (SafeSeaNet), established in accordance with Directive 2002/59/EC as amended. In addition, email exchange and communication via dedicated radio frequencies are also available to serve as backup options.

7.~~3~~5 Personnel operating the system: Stations will be manned by qualified ~~Naval~~ personnel on a 24-hour basis. ~~Duty officers are qualified Senior Chief Petty officers.~~

8 ALTERNATIVE COMMUNICATION IF THE COMMUNICATION FACILITIES OF THE SHORE-BASED AUTHORITY FAIL

~~Each station will assure relief of the other one in case of failure.~~

8.1 The system is designed with sufficient system's redundancy to cope with typical failures of the shore-based Authority's communication facilities.

8.2 In the event of radio communication system failure, communication will be maintained via a redundant standby VHF system. If the radar or other essential equipment becomes inoperative, a notice of reduced operational capability will be issued by Bonifacio Traffic or via a national navigational warning.

9 MEASURES TO BE TAKEN IF A SHIP FAILS TO COMPLY WITH THE REQUIREMENTS OF THE SYSTEM

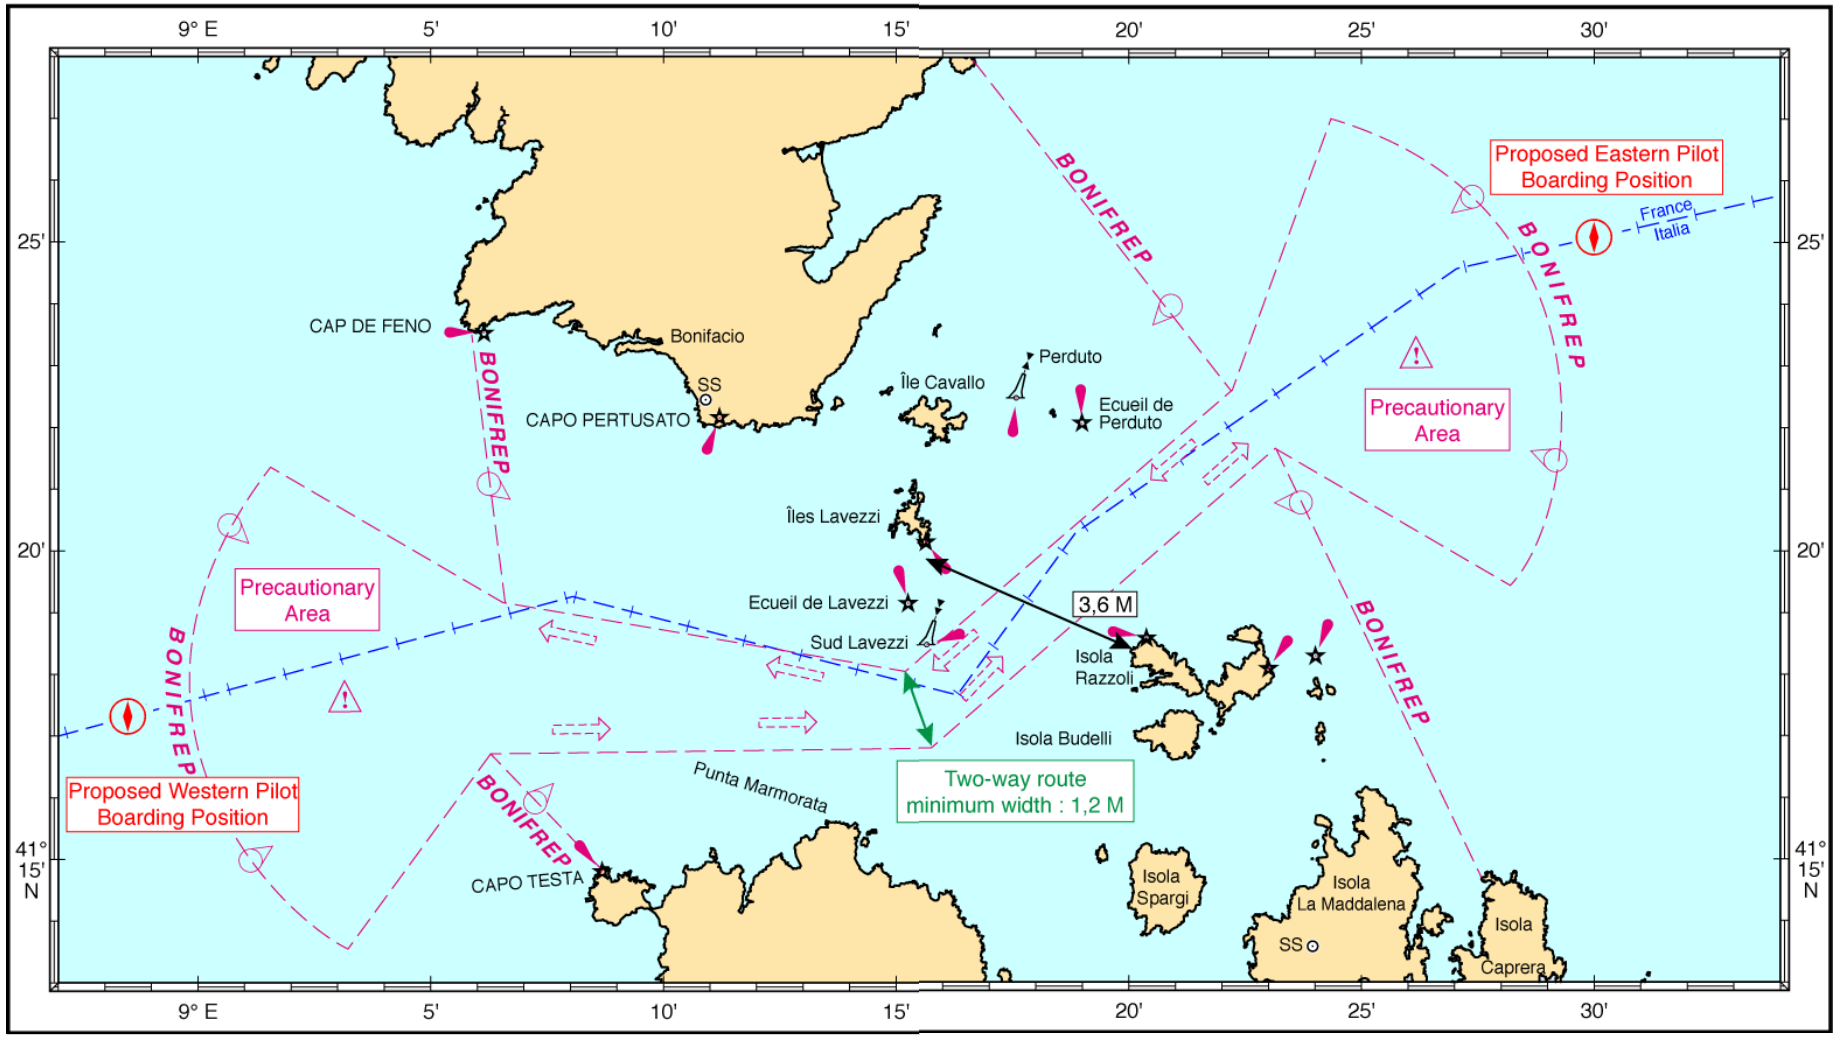
9.1 The primary objective of the system is to support the safe navigation and the protection of the marine environment through the exchange of information between the ship and the shore. If a ship does not submit reports and can be positively identified, then information will be passed to the competent flag State authorities for investigation and possible prosecution in accordance with national legislation. Information will also be passed to port State control inspectors.

9.2 With regard to Liability certificates, this action should be taken only if the flag State is party to the relevant Conventions.

9.2 This reporting system will be implemented consistent with UNCLOS, SOLAS and other relevant international instruments so that the reporting system will not provide the basis to impinge on a transiting vessel's passage through the reporting area.

APPENDIX 1

BONIFREP OPERATIONAL AREA



APPENDIX 2

Contact information and assigned VHF channels in the mandatory ship reporting system in the Strait of Bonifacio (BONIFREP)

BONIFREP, radio call sign:	**"Bonifacio Traffic"**

Website for electronic ship reporting:	https://bonifrep.emsa.europa.eu/

VHF Channels:	VHF Channel 10 and VHF Channel 16 as back-up

Email:	FR: semaphore-pertusato.cdq.fct@intradef.gouv.fr IT: so.cplamaddalena@mit.gov.it

Phone:	FR: + 33 (0)495731886 IT: +39 0789 736709 / 338 7170089

Ships within the mandatory ship reporting system in the Strait of Bonifacio report primarily by the SafeSeaNet web user interface for electronic ship reporting at: https://bonifrep.emsa.europa.eu. Alternatively, by email, VHF voice and telephone or a combination of these communication means.

APPENDIX 3

SUMMARY
(Ship Reporting System)

1 General

1.1 Vessels concerned:

All ships of 300 GT and over

1.2 Geographical position for submitting reports

1.2.1 Area on entering which vessels shall report Sailing Plan (SP):

Ships shall transmit their reports on entering the precautionary areas defined in the documents about routeing measures in the Strait of Bonifacio, or when passing the following lines:

- East Bound:

  · A line linking the beacon of Cap De Fano in Corsica to the geographical position
  41° 19'.18 N 009° 06'.51 E
  (West end of the North limit of the two-way route)

  · A line linking the beacon of Capo Testa in Sardinia to the geographical position
  41° 16'.75 N 009° 06'.18 E
  (West end of the South limit of the two-way route).

- West Bound

  · A line linking Pointe De Rondinara in Corsica to the geographical position
  41° 22'.55 N 009° 22'.38 E
  (East end of the North limit of the two-way route)

  · A line linking Punta Galera in Sardinia to the geographical position
  41° 21'.58 N 009° 23'.30 E
  (East end of the South limit of the two-way route)

1.2.2 Point at which vessels shall report Position Report (PR):

The ship shall transmit the Position Report (PR) using the VHF communication when passing south of the Lavezzi buoy (43° 18'35.82" N 009°15'15.06" E).

1.~~2~~3 Reference chart

French (SHOM) chart No.7024 International chart No.3350.

2 **Reporting format** (in accordance with resolution A.851(20) – *General principles for ship reporting systems and ship reporting requirements, including guidelines for reporting incidents involving dangerous goods, harmful substances and/or marine pollutants*).

Name of system: BONIFREP

Data to be transmitted:

Sailing Plan (SP)

Heading	Information
A	Name + call sign + IMO number
~~C~~B ~~or~~and ~~D~~C	Time and Position
E and F	Course and speed
G	Port of departure
I	Port of destination and estimated time of arrival
O	Draught
P	Cargo (in case of transport of oil products, hazardous or pollution substances)
Q	Defect or damage (if relevant)
~~P~~R	Polluting/dangerous goods lost overboard (if relevant)
T	Contact information (shipowner or representative) for communication of cargo information
W	Total number of persons on board
X	- Navigational status - Characteristics and estimated quantity of bunker fuel - One or more convention certificates of insurance issued by a party to the conventions and carried on board the ship, providing evidence of existence of insurance for maritime claims, as well as civil liability certificates, as applicable, issued in accordance with: - the International Convention on Civil Liability for Oil Pollution Damage, 1992, as amended (1992 Civil Liability Convention); - the International Convention on Civil Liability for Bunker Oil Pollution Damage, 2001 (2001 Bunkers Convention); and, - the Nairobi International Convention on the Removal of Wrecks, 2007 (2007 Nairobi WRC).

In the event of a defect, pollution or goods lost overboard, additional information may be requested.

Position Report (PR)

Heading	Information
A	Name, call sign and IMO number
D	Bearing and Distance from the Sud Lavezzi buoy
E	Next course of the ship

3 Authority to whom the report shall be sent

Pertusato French ~~Naval~~ Navy Signal Station (France) – La Maddalena Coast Guard Station (Italy); common call sign: BONIFACIO TRAFFIC.

4 Communications facilities

Reports are to be submitted electronically via the SafeSeaNet platform, which serves as the primary reporting tool. The SafeSeaNet web user interface is used for submitting and reviewing BONIFREP reports, as well as consulting responses from coastal State authorities. Using SafeSeaNet, vessels can access relevant ship information and make use of existing data when preparing new reports. The SafeSeaNet web user interface is available at: https://bonifrep.emsa.europa.eu where ships can self-register to create an account.

In addition, email and communication via dedicated radio frequencies are also available to serve as backup options. The reports are to be transmitted on VHF channel 10 (or on channel 16 if not possible).
